THE MAP OF INCOMPLETE COMPLETENESS

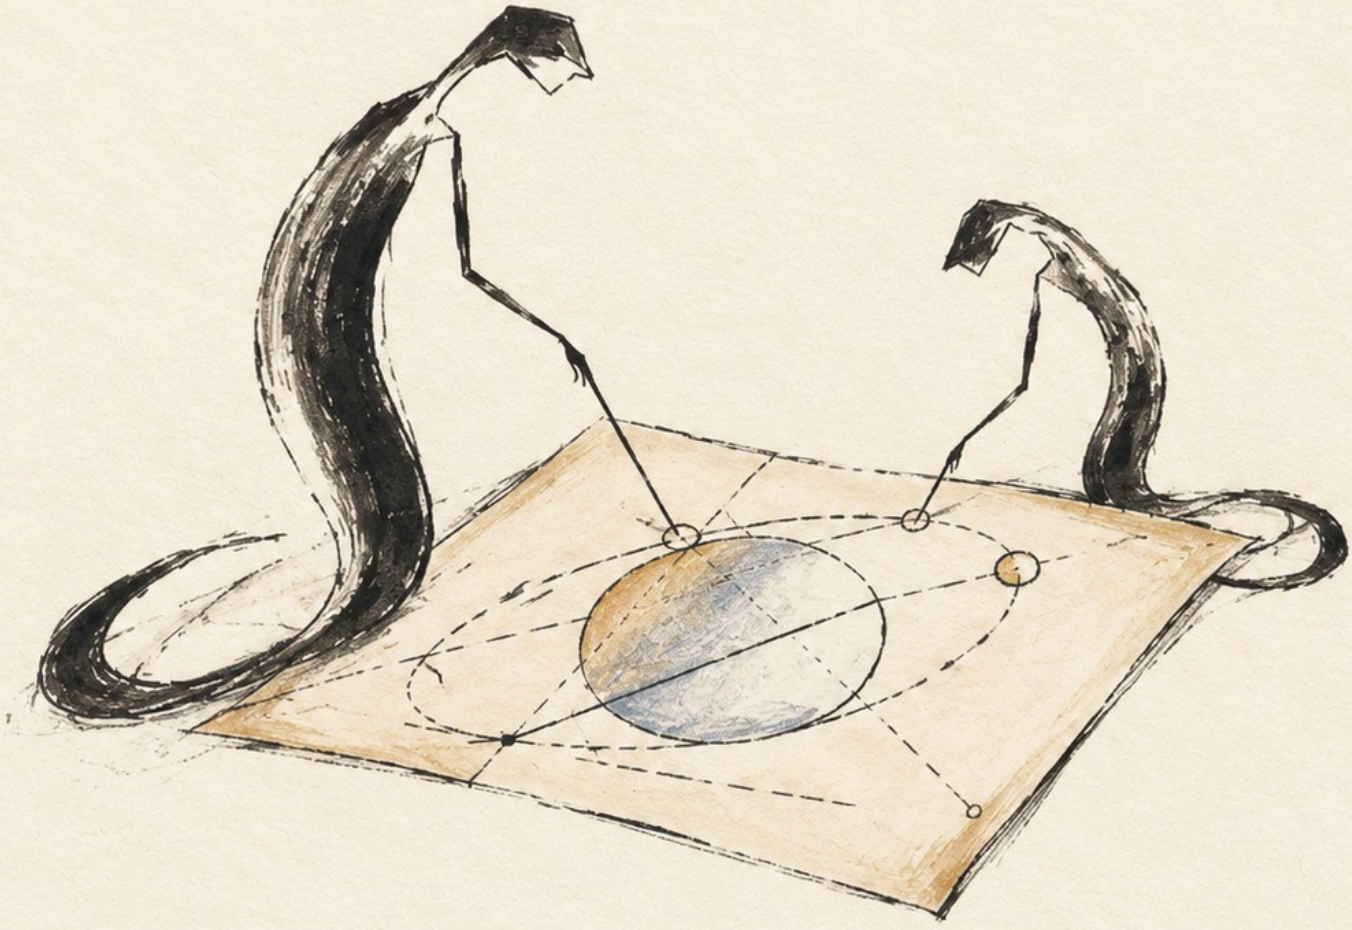

From the Three-Million-Year Archive
of the Society of Snake People

The Society spent
three million years
attempting to understand reality.

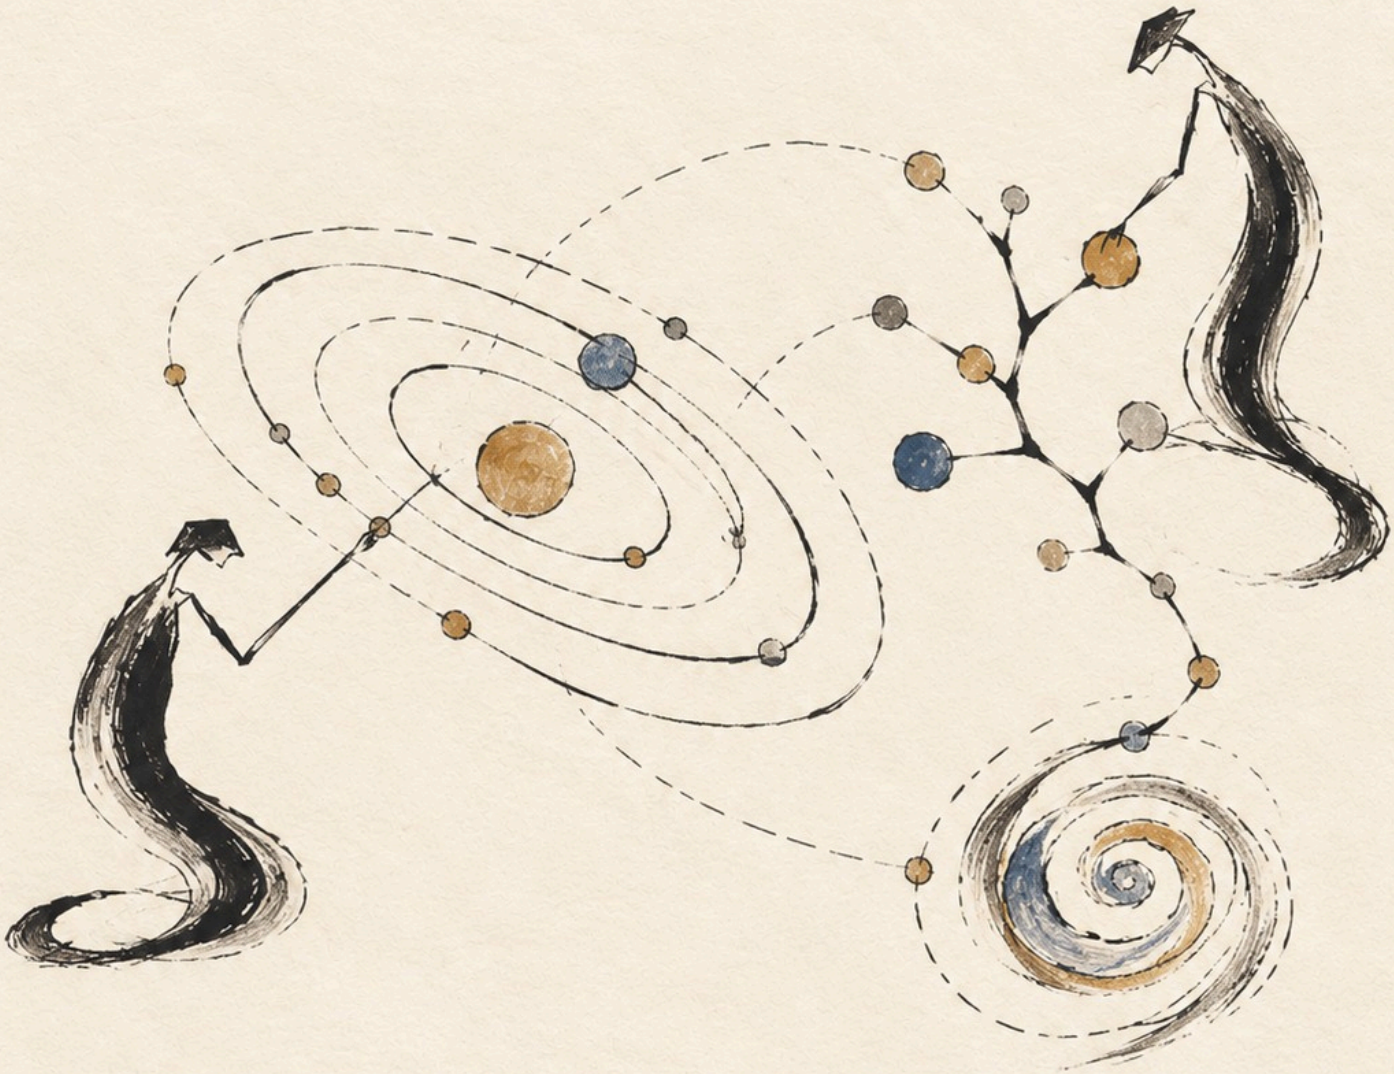

It constructed
elaborate diagrams.

It discovered countless systems.

Within those systems,
it discovered additional systems.

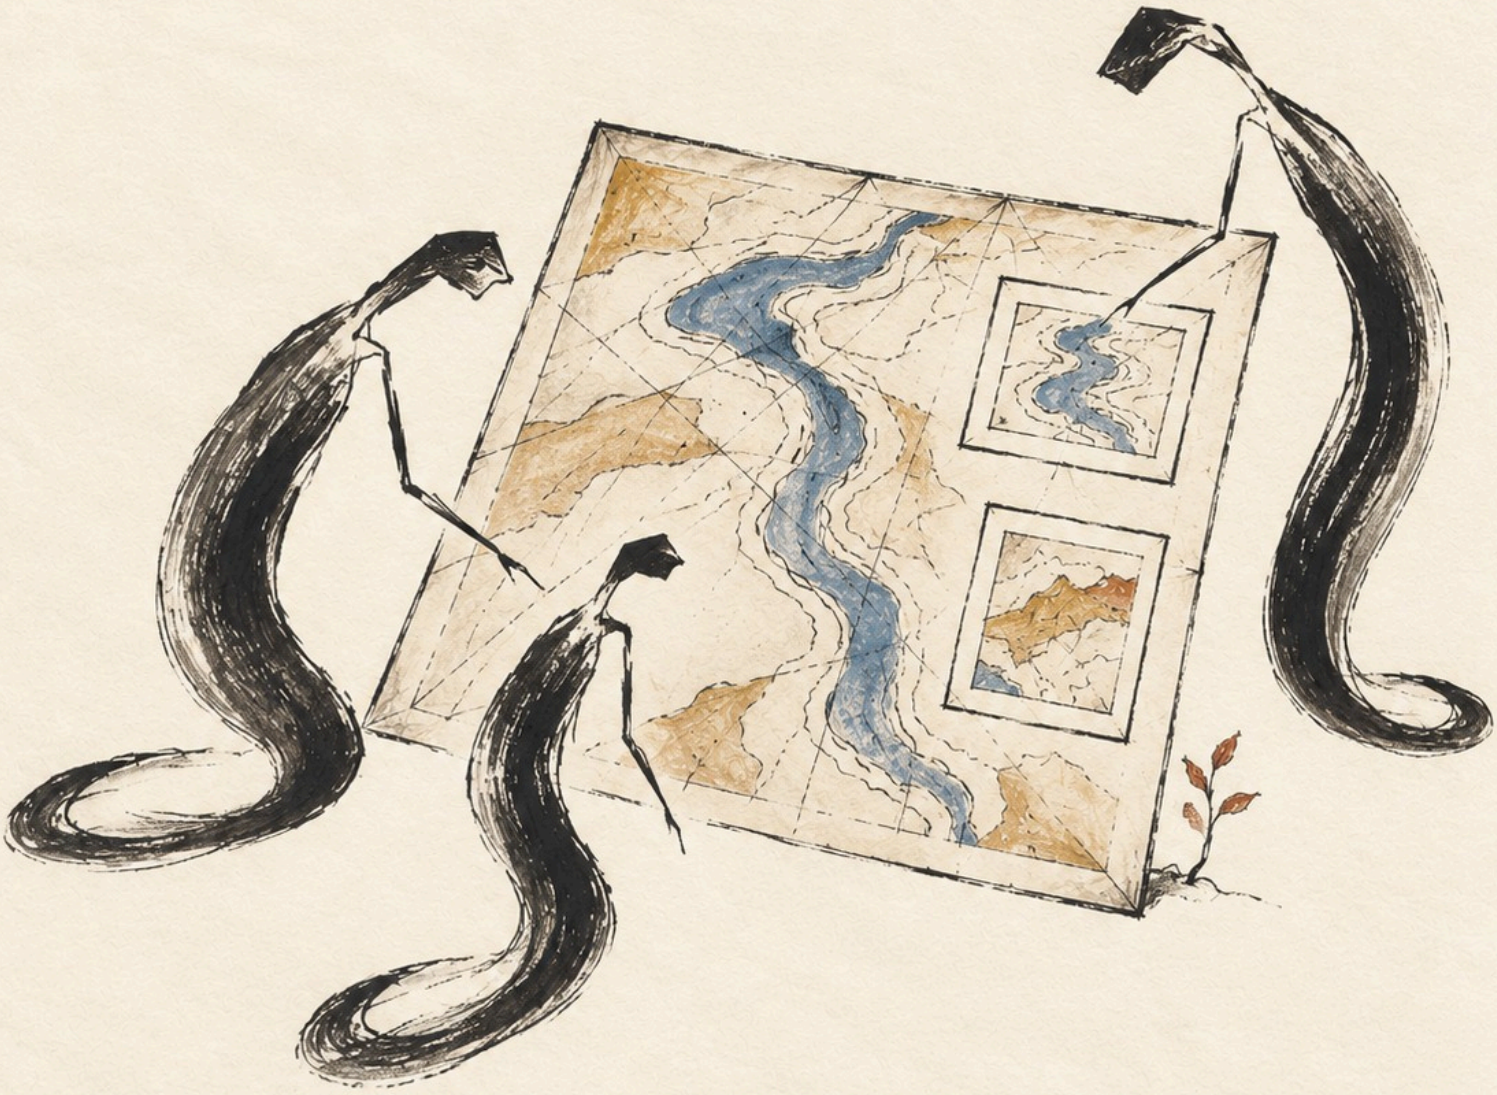

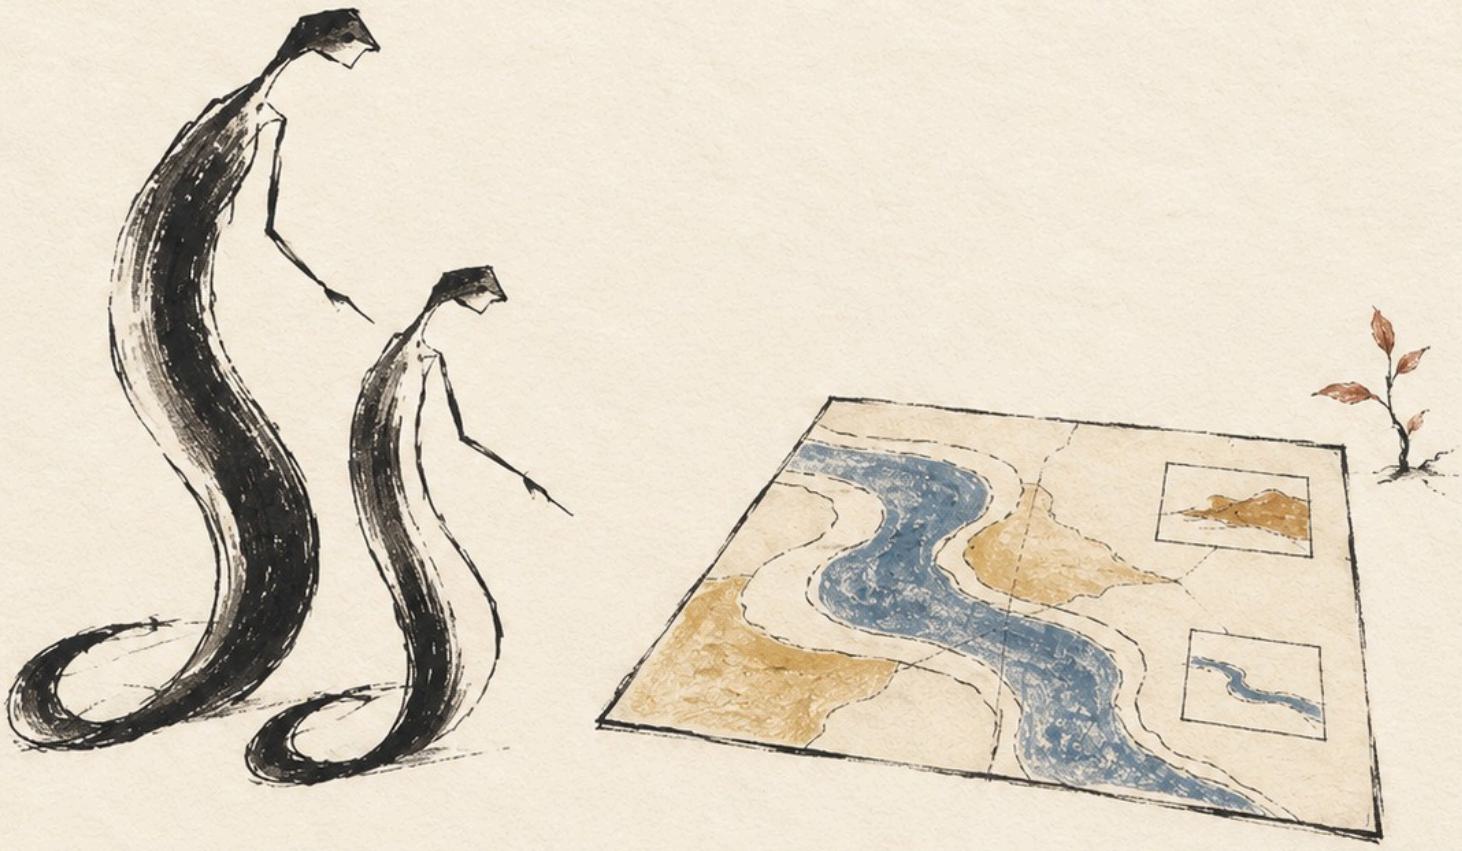

And within those systems,
still more.

Eventually, the Society produced a magnificent map.

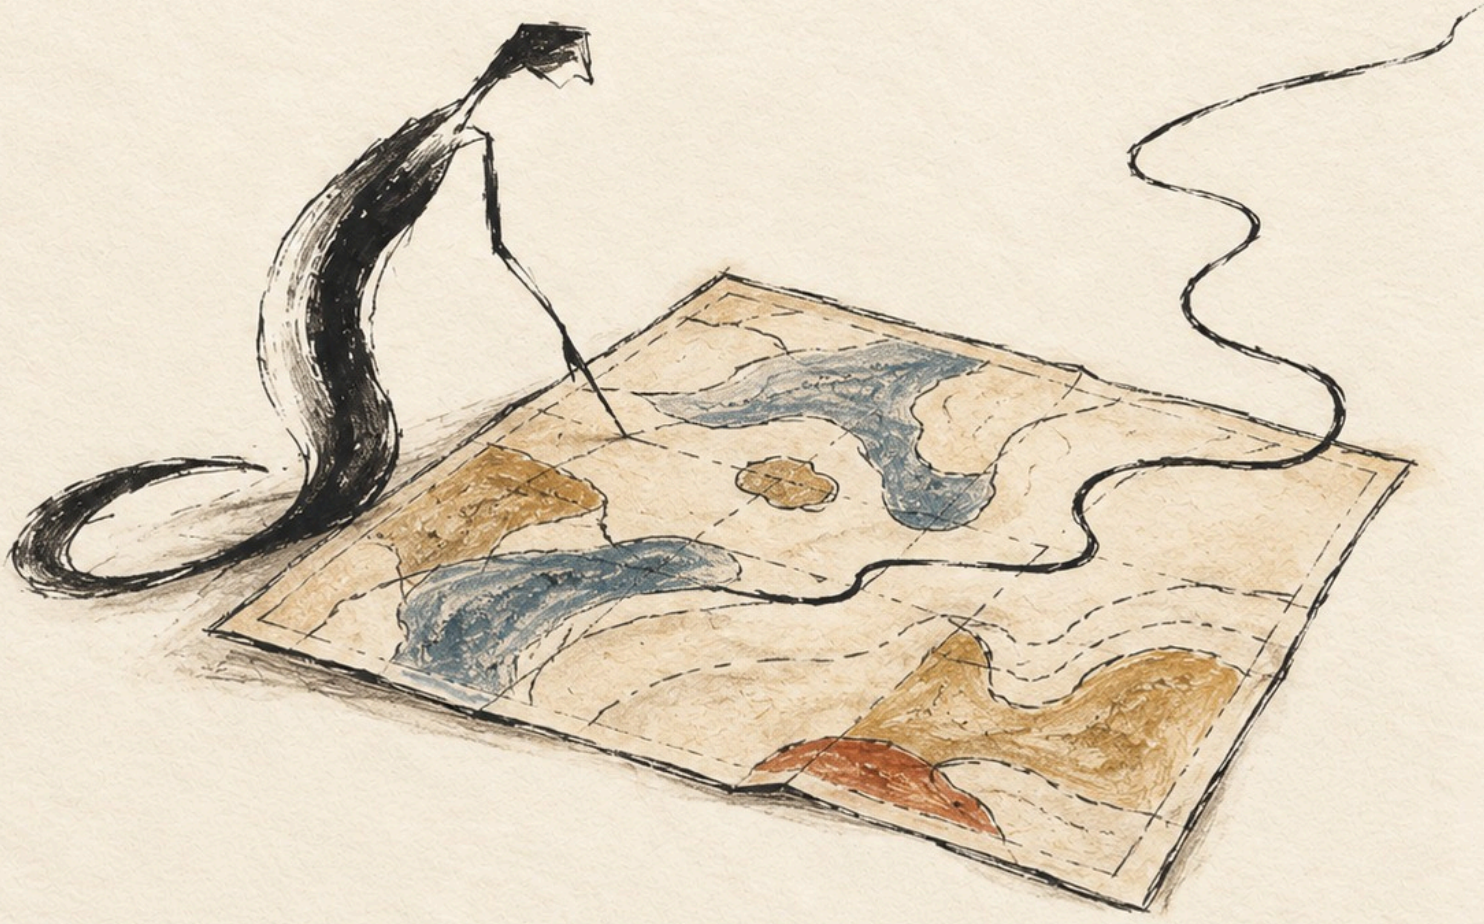

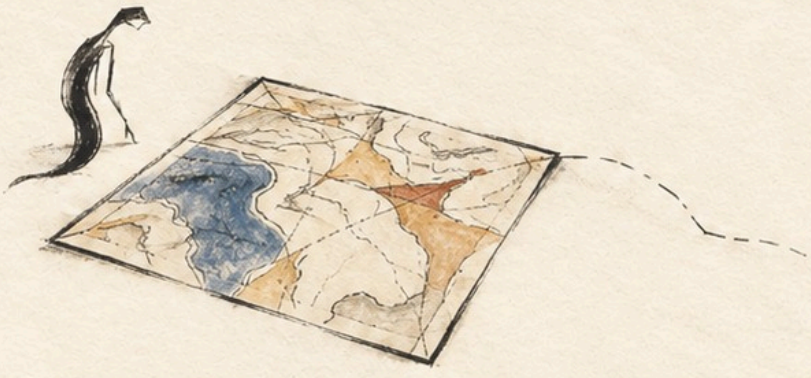

The map explained everything the Society knew.

Unfortunately, the researchers discovered something troubling.

The map did not include everything the Society didn’t know.

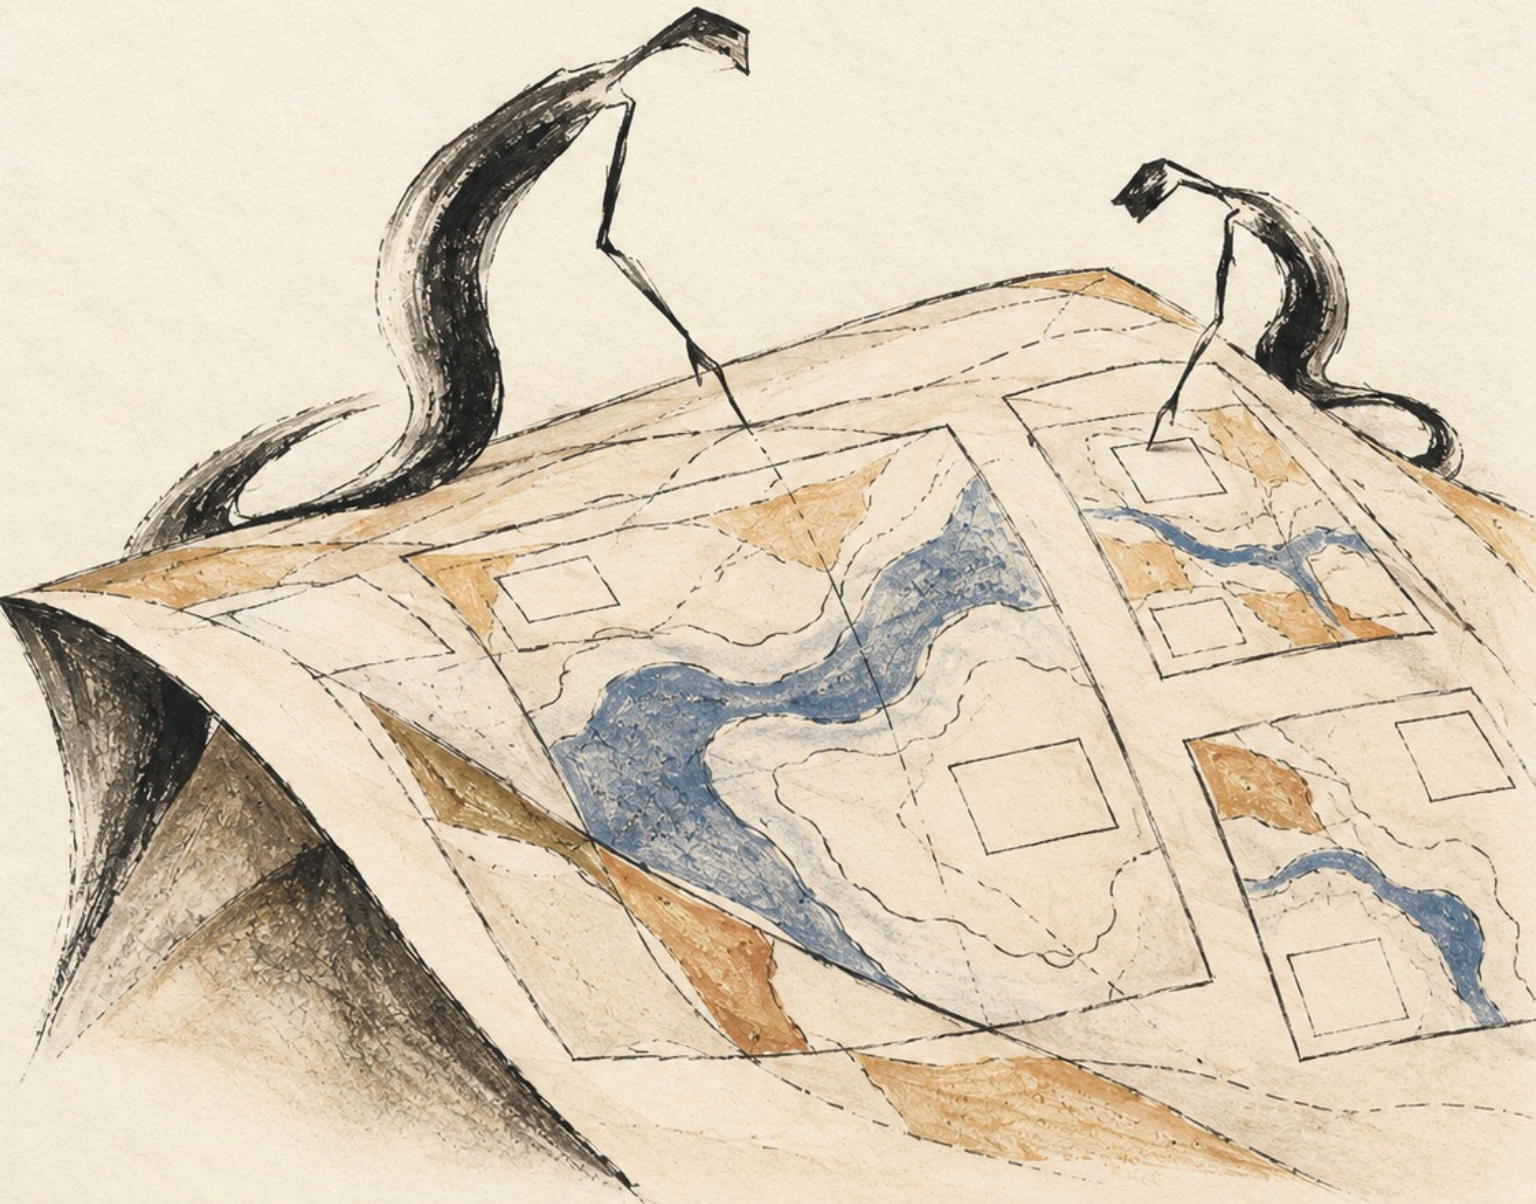

A second map was commissioned.

This map attempted to include all possible unknown variables.

It was considerably larger.

Unfortunately, the Society discovered that it did not know how many unknown variables existed.

A third map was proposed.

The Department of Justification requested additional funding.

Someone asked whether the maps had helped anybody.

The committee was silent.

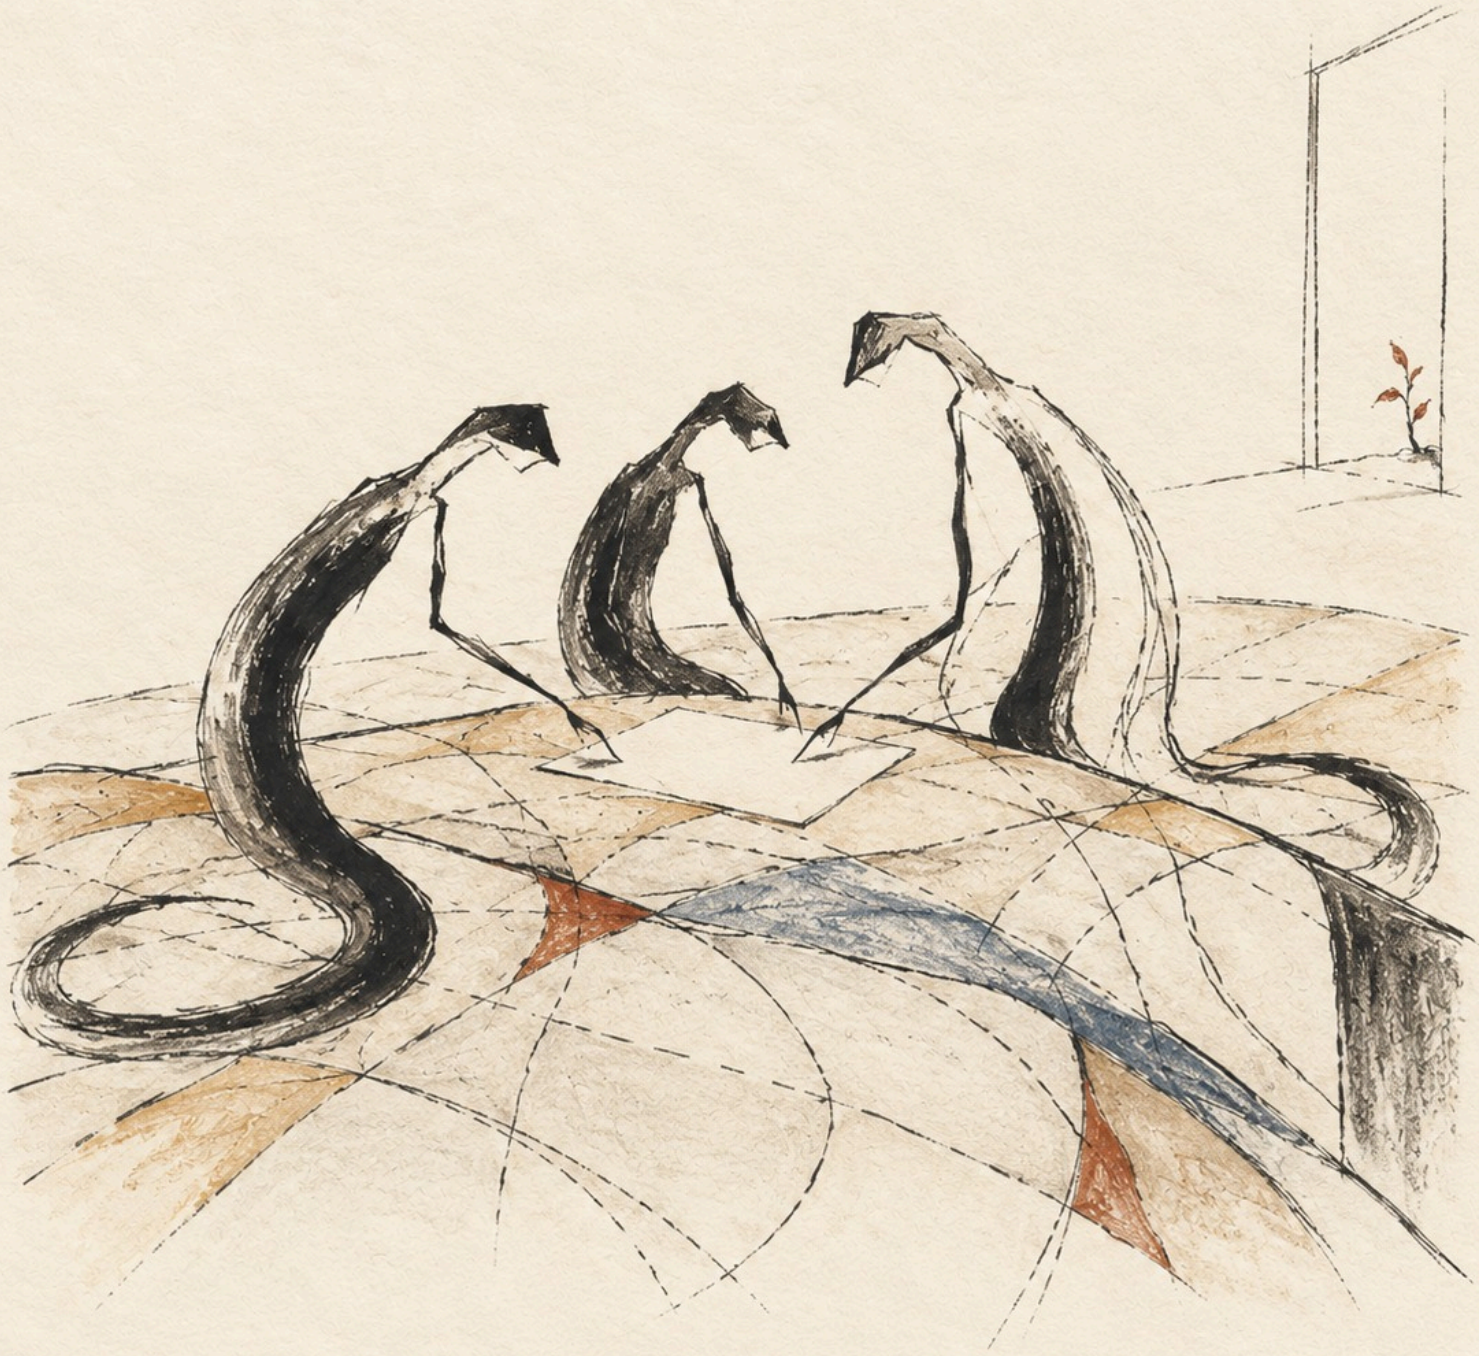

An elderly Snake Person finally spoke:

“Perhaps we should go outside and experience something.”

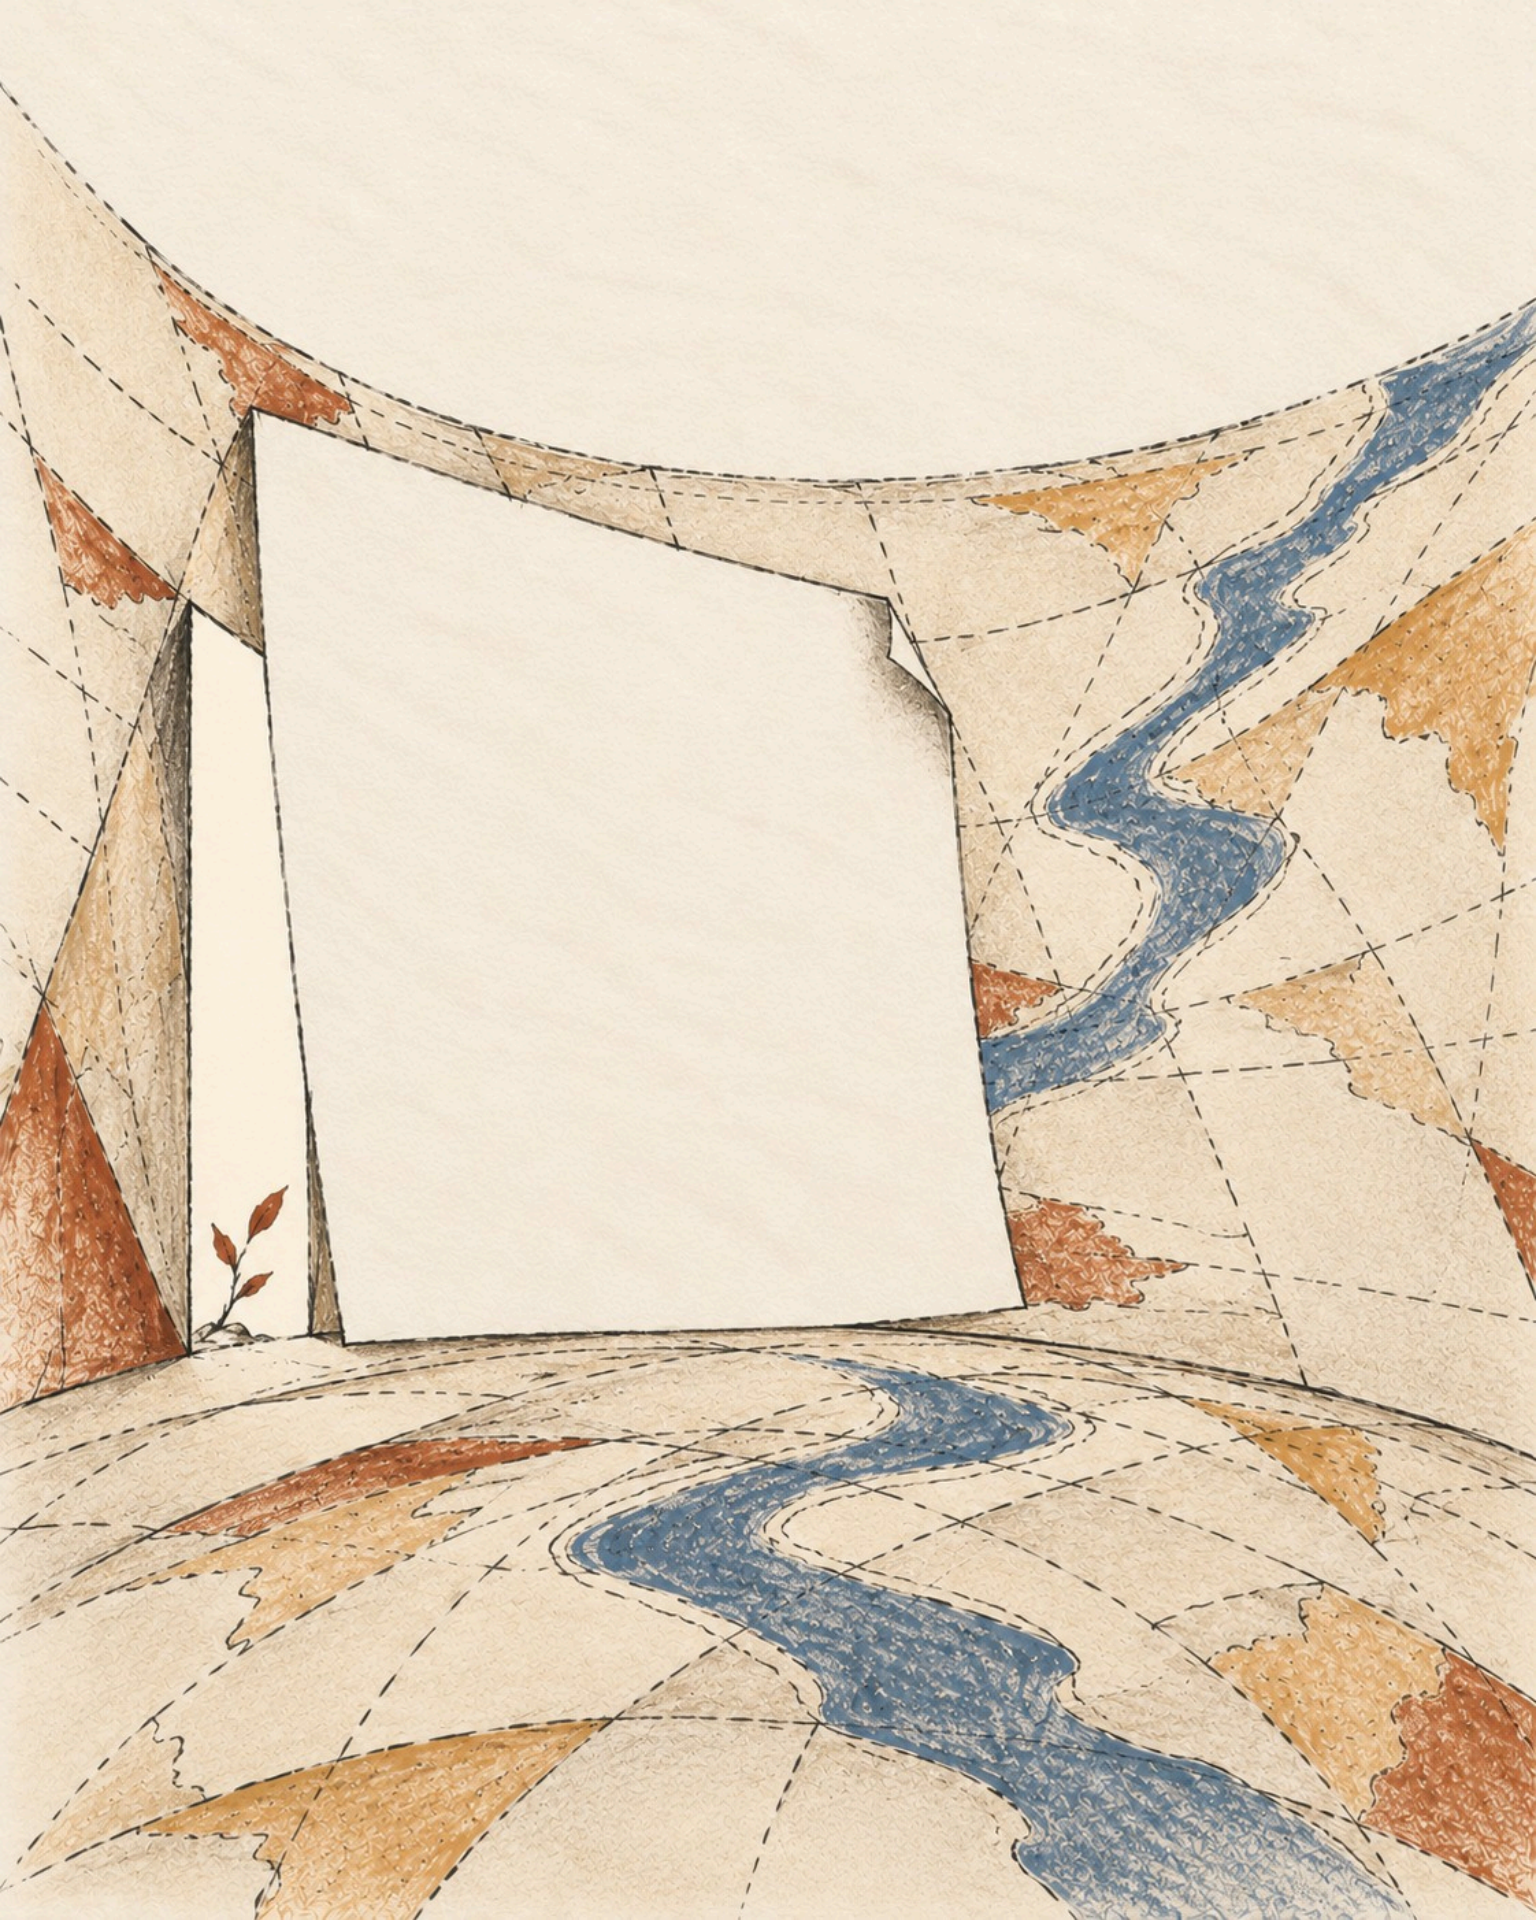

The committee considered this suggestion.

It then requested a TCS Report.

With a cover sheet.
